---

Dear Hiring Team,

I'm writing to express my enthusiasm for the opportunity to contribute my leadership skills to your esteemed organization.

I'm a hands-on engineering leader and architect with 8+ years of experience building and scaling backend systems across agritech, fintech, logistics, and e-commerce. I enjoy owning complex engineering problems end to end, from designing system architecture to writing production code, optimizing performance, and ensuring security and reliability in real-world environments.

In my current role as VP Technical Lead at Agribazaar, I lead the engineering vision and execution for platforms that have processed ₹357B+ in transactions across 400K+ virtual accounts. I've built real-time auction engines, multi-bank virtual account and settlement systems, and GIS-powered analytics platforms for government use. My focus is always on building systems that scale smoothly, stay resilient under load, and remain secure by design.

I stay close to the code and architecture, applying solid design principles and event-driven thinking to create systems that are maintainable and future-ready. Alongside this, I mentor teams, guide technical decisions, and raise engineering standards while keeping delivery practical and outcome driven.

I'm looking for opportunities where I can combine technical depth with leadership, shaping technology direction, solving meaningful problems, and building platforms and teams that grow with confidence.

Sincerely,  
Navaneeth
